Agency Priority Goal | Action Plan | FY 23 – Q4

Electric Vehicle Charging Infrastructure deployment under Bipartisan Infrastructure Law (BIL)

Goal Leader(s): Gabe Klein, Executive Director (Joint Office of Energy and Transportation)
- Michael Berube, Deputy Assistant Secretary for Sustainable Transportation (DOE)
- Ann Shikany, Deputy Assistant Secretary for Policy (DOT)
Summary of Accomplishments

All major milestones and goal targets for Department of Energy (DOE) and Department of Transportation’s (DOT) Agency Priority Goal for deploying EV charging infrastructure have been successfully met. As of September 30, there were 159,215 public EV charging ports, eclipsing the Dec. 31 target of 160,000 charging port shortly thereafter in early October. The trajectory of growth in EV charging puts the United States ahead of schedule in meeting the Biden-Harris objective of 500,000 EV charging ports by 2030.

Through efforts captured in the EV Charging Agency Priority Goal, a number of key actions were taken to ensure a convenient, affordable, reliable, and equitable EV charging network in the United States. Beginning in December 2021 with the establishment of the Joint Office of Energy and Transportation (Joint Office), a novel and necessary office in the federal government to meet this ambitious goal, DOE and DOT, working with partners across the federal government, took immediate action. The National Electric Vehicle Infrastructure (NEVI) program, which provides $5 billion in formula funding to states was launched in 2022 with all states, Washington DC and Puerto Rico submitting and receiving approval their first-year plans. In July, the Joint Office published the NEVI Annual Report summarizing key activities from state EV infrastructure deployment plans. A total of $2.45 billion, including $100M in competitive grants to repair and replace inoperable EV chargers, has been made available for apportionment since the NEVI program was established. The Charging and Fueling Infrastructure (CFI) grant program was launched in March 2023, unlocking up to $700 million in investment to electrify highway corridors and communities. Underpinning these investments is a set of minimum standards and requirements published in February 2023 that will ensure all drivers have a consistent, high-quality EV charging experience when utilizing federally funded EV chargers.

Critical investments were also made to ensure that Americans can ride and drive electric. The Federal Transit Administration, through its Low or No Emission Vehicle Program has made awards totaling $3.3 billion bringing the total number of zero-emission transit buses funded by the Bipartisan Infrastructure Law over two years to nearly 1,800 – and more than doubling the number of zero-emission transit buses on America’s roadways. The U.S. Environmental Protection Agency has awarded almost $1 billion in rebates for the Clean School Bus Program, which will support approximately 2,400 school buses in over 400 school districts across the country.

In September 2023, the Joint Office of Energy and Transportation convened members of the Electric Vehicle Working Group (EVWG) to advise the Secretaries of Energy and Transportation on matters related to electric vehicles. Underpinning these investments, the Joint Office has provided over 5,200 technical assistance inquiries through DriveElectric.gov, conducted more than 220 stakeholder meetings, and participated in more than 285 invited speaking engagements to help ensure success in these programs.
Goal Overview

Goal statement
Deploy Electric Vehicle Charging Infrastructure under the Bipartisan Infrastructure Law (BIL): The BIL invests in the deployment of a national network of electric vehicle (EV) chargers as one of many important ways that the Department of Transportation (DOT), the Department of Energy (DOE) and their newly formed Joint Office of Energy and Transportation are addressing the climate crisis. All three entities will support building a national network of electric vehicle chargers towards the President’s BIL goal of installing 500,000 EV chargers. By September 30, 2023, the Joint Office of Energy and Transportation in conjunction with DOT and DOE will complete the following critical building blocks needed for the deployment of EV charging infrastructure:

• Issue a set of minimum standards and requirements for all EV chargers deployed under Title 23 generally, and the “National EV Infrastructure (NEVI) Formula Program” specifically, to ensure a convenient, affordable, reliable, and equitable EV charging network
• Facilitate the development and approval of State, Puerto Rico, and District of Columbia EV charging plans to establish a cohesive national EV charging network that covers all Interstates and designated highway corridors
• Distribute formula funds through the “National EV Infrastructure Formula Program” and awarding competitive grants under the NEVI Discretionary Grant Program to eligible entities following the timeline specified in the BIL
• Launch a federal EV Advisory Committee
• Provide technical assistance to school districts and transit operators deploying electric school and transit buses under BIL programs; and
• Increase the number of public EV charging ports to 160,000 by the end of calendar year 2023 (Dec. 31).

Problem to Be Solved
The BIL makes the most transformative investment in EV charging in United States history to help tackle the climate crisis, create good-paying, union jobs to build the clean energy economy, and facilitate American innovation and energy independence

What Success Looks Like
A nationwide network of at least 500,000 EV chargers by 2030 that ensures a convenient, reliable, affordable, and equitable charging experience for all users

Goal Team

Goal Lead: Gabe Klein – Executive Director, Joint Office of Energy and Transportation

DOT Lead: Ann Shikany – Deputy Assistant Secretary for Policy, U.S. Department of Transportation, Office of the Assistant Secretary for Transportation Policy

FHWA Lead: Andrew Rogers – Deputy Administrator, Federal Highway Administration

FTA Lead: Veronica Vanterpool – Deputy Administrator, Federal Transit Administration
Goal Strategies: Publication of Final Rule

- Issuing a set of minimum standards and requirements for all EV chargers deployed under the BIL programs to ensure an affordable, reliable, accessible, and equitable EV charging network

Strategies:

- **Develop Notice of Proposed Rulemaking (NPRM)** - An NPRM was created through a close collaboration among DOT, DOE, and the Joint Office of Energy and Transportation. The drafting team members included in this effort represented EV experts as well as subject matter experts in Administration priorities, including experts in Justice40, equity, and labor/workforce. It was published in the Federal Register on June 22, 2022 with a public comment period that ended on August 22, 2022.

- **Finalize draft of Final Rule** - The Final Rule language underwent a thorough review by DOT and DOE, conducted by a broad range of experts in EVs and in Administration priorities to ensure that public comments and the goals for the network (convenience, affordability, reliability, and equity) are addressed to the greatest extent legally possible.

- **OIRA review** - While other Federal agencies (e.g., the Departments of Justice and Treasury) have already been included in the development of the NRPM, the broader interagency review allowed the Final Rule drafting team to obtain additional feedback from agencies that have not yet been consulted with. As with the comments received from stakeholders and the public, appropriate input was incorporated to the greatest extent legally possible toward the goal of maximizing the priorities for the EV charging network.

- **Publish Final Rule**. The Final Rule was published in the Federal Register on February 28, 2023, with an effective date of March 30, 2023. The regulations are established in Title 23 of the Code of Federal Regulations as Part 680.
Goal Strategies: Review of state EV plans and distribution of funds

- Facilitating the development and approval of state, Puerto Rico, and District of Columbia EV charging plans to establish a cohesive national EV charging network that covers all Interstates and designated highway corridors. Distributing formula funds via the “National EV Infrastructure (NEVI) Formula Program”

Strategies:

- **Develop criteria to review state plans** - The criteria pulled from the guidance document issued in February 2022 and were intended to both maximize the productivity and effectiveness of the program as well as addressing Administration priorities, such as Justice40, equity, and labor/workforce development.

- **Meet with states ahead of state plan submission** - Representatives of the Joint Office and FHWA met with states to answer questions, provide information, and evaluate state DOT progress to date, with the goal of maximizing the likelihood that States submitted plans that addressed all established criteria and were therefore appropriate for approval.

- **Plans submitted by August 1, 2022 to Joint Office** - As part of the meetings with states discussed above, DOT and the Joint Office sought to maximize the likelihood and improve the quality of state plans across all states, Puerto Rico, and the District of Columbia prior to the specified due date. All States, Puerto Rico, and the District of Columbia submitted plans by the due date.

- **Review of state plans for National EV charging network that meets the guidance to states** - State plans were evaluated according to the established criteria that had been communicated to them through the NEVI program guidance, additional published documentation such as frequently asked questions, and further supported by meetings and webinars.

- **Certification of State Plans** - Following an evaluation according to established criteria, the Joint Office provided certification recommendations to FHWA. Following the receipt of certification recommendations, DOT reviewed and certified all plans by September 27, 2022. State plans will be summarized and made available, per the Bipartisan Infrastructure Law, on DriveElectric.gov

- **Approval to use distributed funds** - All states were provided approval to utilize fiscal years 2022 and 2023 formula funding for EV charging installation projects in accordance with guidance and minimum standards and requirements issued by FHWA.
Goal Strategies: Issue Discretionary Grant Program

- Awarding competitive grants under the Discretionary Grant Program for Charging and Fueling Infrastructure to eligible entities following the timeline specified in the BIL.

Strategies:

- **Establish the Discretionary Grant Program for Charging and Fueling Infrastructure** - The development of this program seeks to maximize the goals of the program as laid out in BIL as well as other Administration priorities, such as Justice40, labor/workforce, and equity.

- **Develop Notice of Funding Opportunity (NOFO)** - The NOFO includes grant evaluation criteria that reflect program and Administration priorities.

- **Solicit Applications** - The NOFO was published on Grants.Gov on March 14, 2023. Applications are due by June 13, 2023.

- **Review Applications** - The review team members included in this effort represent EV experts as well as subject matter experts in Administration priorities, including experts in Justice40, equity, and labor/workforce. The FHWA and the Joint Office will establish cross-agency teams to fully leverage the expertise available within both departments on these key issues. Consistent with M-22-12, the PIOs participate in cross-functional infrastructure implementation teams related to performance planning, management and reporting related to BIL and IIJA implementation.

- **Select Projects and Award Funding**
Goal Strategies: Launch EV Working Group

• Launching a federal EV Advisory Committee

Strategies:

• **Establish Federal Advisory Committee and charter for EV working group** - DOE will host the administrative support of the FACA and implementation with continuous DOT input, coordination, and review.

• **Request nominations for EV working group members** - A Request for Nominations (RFN) will be published that seeks potential candidates for participation in the working group.

• **Select members for EV working group** - The evaluation and ultimate selection of members for the working group will be a fully collaborative process between DOE and DOT. Both agencies recognize the importance of diversity in this working group and will seek to achieve a diverse membership to the greatest extent possible given the membership parameters set by the Bipartisan Infrastructure Law.

• **Hold first meeting of EV working group**
Goal Strategies: Technical Assistance for Electric Transit and School Buses

• Offering technical assistance to school districts and transit operators deploying electric school and transit buses under BIL programs

Strategies:

• **Establish FY22 and FY23 budget for school and transit bus technical assistance** - DOT and DOE have recognized the important role that the Joint Office and its staff, with their depth and breadth of transportation electrification knowledge and experience, may play in supporting the Environmental Protection Agency’s efforts to electrify school buses and Federal Transit Administration’s efforts to electrify public transit buses, and will seek to provide technical assistance to school districts and transit agencies in order to strengthen the industries progress in these areas.

• **Continue building on FY22 operational activities, including the launch of a technical assistance + expanded concierge service platform** – The Joint Office technical assistance platform was successfully launched in June 2022, allowing for technical questions from EPA and FTA stakeholders to be answered by subject matter experts. Joint Office staff will continue to develop and refine technical assistance services and resources.

• **Establish key partnerships with transit and school bus associations to facilitate peer exchange** - The Joint Office, in coordination with FTA and EPA, will facilitate coordination among key stakeholders in transit and school bus sectors to ensure resources are shared to support technical assistance, lessons learned, and best practices.

• **Issue solicitation for planning grants to transit operators and school districts**

• **Establish RideElectric.gov website for technical assistance for transit and school buses**

**Key milestones [Joint & Program Offices]**

Summary of progress

**Narrative – FY 23 Q4**
• Membership of the Electric Vehicle Working Group (EVWG), a Federal Advisory Committee to the Secretaries of Energy and Transportation, was announced on August 3 and held its first meeting on September 26. The EVWG is a collection of electric vehicle (EV) industry experts and leaders who will help guide the widespread adoption of EVs across the country and solidify America’s position as a global leader of clean energy jobs and manufacturing.

• A Notice of Funding Opportunity (NOFO) was issued for the Electric Vehicle (EV) Charger Reliability and Accessibility Accelerator program, which will provide up to $100 million in federal funding to repair and replace non-operational EV charging infrastructure. The funding opportunity closes November 13 and awards are expected shortly thereafter.

• The U.S. Department of Transportation is accelerating the installation of electric vehicle (EV) charging stations by adopting a Department of Energy Electric Vehicle Charging Station Categorical Exclusion (CE) under the National Environmental Policy Act (NEPA).

• Updated state plans for the National Electric Vehicle Infrastructure (NEVI) program were submitted to the Joint Office on August 1. Approval and certification of these plans by the Federal Highway Administration will unlock an additional $885 million in funding bringing total FY22-24 allocations under NEVI to $2.35 billion.

• On September 29th, the U.S. Environmental Protection Agency (EPA) announced it has opened the 2023 Clean School Bus (CSB) Rebate Program—the third funding opportunity released under the CSB Program. The 2023 rebate program offers at least $500 million in rebate funding with the potential to modify this figure based on the application pool and other factors.

Additional information
Contributing Programs

Organizations:
- Federal Highway Administration – National Electric Vehicle Infrastructure Formula Program and Charging and Fueling Infrastructure Discretionary Grant Program
- Federal Transit Administration – Low or No Emission Grant Program
- Environmental Protection Agency – Clean School Bus Program

Regulations:
- Office of Information and Regulatory Affairs – facilitation of NPRM review and publication

Stakeholder / Congressional Consultations
- On November 29, 2021, FHWA published a request for information in the Federal Register to obtain public comments on the implementation of the EV charging infrastructure programs in BIL.
- The White House, in coordination with DOE and DOT, led a series of EV charging stakeholder engagements in December 2021.
- The Joint Office of Energy and Transportation provides Congressional notification of funding transfers between DOT and DOE to support its activities.
- The Joint Office of Energy and Transportation has signed a memorandum of understanding with the American Association of State Highway and Transportation Officials (AASHTO) and National Association of State Energy Officials (NASEO) to support the development and implementation of state EV charging plans. In July 2022, the Joint Office of Energy and Transportation formalized a cooperative agreement with AASHTO and NASEO to collaborate on technical assistance at the national, regional, state, and local level. A public kickoff meeting with over 300 stakeholders was held in September 2022.
- The development of the minimum standards and requirements require stakeholder consultation, which was obtained by the notice of proposed rulemaking that was published in the Federal Register. 384 comments were received by the August 22 deadline.
- On June 9th and 10th, the Department of Transportation, in collaboration with the Department of Energy and White House, hosted the Charging Forward Symposium to showcase both current electric vehicles and electric vehicle...
charging technology and to further the discussion on how to build a national network of EV chargers equitably and effectively.

- On August 31, FHWA published a proposed waiver for BuyAmerica provisions related to EV charging sites. 90 comments were received by the September 30 deadline.
- On September 15, the Federal Transit Administration, in collaboration with the Joint Office, held a webinar joined by over 400 participants, on new technical assistance to support transit agencies shift to for low or no emission transit vehicles and fleets.
- On September 8th, FTA hosted a webinar on the Bus Testing Program Notice of Proposed Rulemaking (NPRM) and invited public comments on a list of topics to streamline and enhance the program.
- On September 19, FTA participated in a panel on “Decarbonizing Transportation with Data” at the Intelligent Transportation Systems (ITS) World Congress in Los Angeles, CA and discussed FTA's data-driven initiatives to help transit agencies transition to a zero-emissions fleet.
- Met with each state to discuss and share feedback on their NEVI plan. During these meetings, the states identified their technical assistance needs for NEVI implementation, which is being used to inform Joint Office plans and priorities for 2023.
- Held discussions with industry to inform of electric school and transit bus technical assistance offerings, including at DOE’s Annual Clean Cities workshop in November.
- Conducted webinars for the Environmental Protection Agency’s Clean School Bus regional leads in November.
- The Joint Office, in coordination with DOE and DOT, has provided multiple briefings to Congressional member and committee staff on the progress of the Joint Office and implementation of federal programs related to EV charging.
- The Joint Office held discussions with industry to inform of electric school and transit bus technical assistance offerings, including at DOE’s Annual Clean Cities workshop in November and held multiple “office hours” webinars with EPA for Clean School Bus rebate selectees where technical questions were asked and answered on the spot by Joint Office. Technical resources were created to meet recurring needs of the fleets identified through the office hours and one-on-one conversations with fleets. As of June 30, the Joint Office has fielded over 200 technical assistance requests, including about a dozen in-depth technical requests from school and transit fleets.
- The Joint Office worked with the National Association of State Energy Officials (NASEO) and the American Association of State Highway and Transportation Officials (AASHTO) to conduct a National Summit in July 2023 along with 6 regional meetings with states earlier in the year to discuss NEVI implementation and increase regional coordination.
The Joint office hosted 13 webinars between April 1 and June 30 with an average attendance of 187. Additionally, the Joint Office supported FHWA to conduct 4 webinars regarding the EV Charging Final Rule and the Charging and Fueling Infrastructure Discretionary Grant Program.

As of March 31, the Joint Office has fielded over 5,000 technical assistance inquiries through DriveElectric.gov, conducted more than 200 stakeholder meetings, and participated in 270 invited speaking engagements.
